

# Chapter 8

## DTD for Alarm Response Tags

This chapter contains the document type definition (DTD) called `junos-alarm.dtd`, which lists the tags returned by the JUNOScript server to describe alarms. The associated Extensible Markup Language (XML) namespace is `http://xml.juniper.net/junos/5.6R1/junos-alarm`. To review reference pages for the tags, see “Summary of Alarm Response Tags” on page 95.
